

Spot Varnish Template and checklist

 Bleed Area
92 x 56mm

 Trim Size
90 x 54mm

 Image Area
84 x 48mm

Creating your Spot Varnish Areas

When creating your spot varnish artwork, duplicate the card below the original artwork, and set the areas you want spot varnished to 100K, this is so we can create the plates when doing the spot varnish.

Check List

1. All dimensions must be as per the template.
2. File needs to be in CMYK, not RGB.
3. Make sure all fonts are converted to outlines/curves.
4. Check that images are at least 300dpi.
5. If there are black colours, please make sure it is set to C30 M30 Y30 K100
This will give you a rich black.

Tip: There are a lot of creative things you can do with spot varnish. Instead of spot varnishing over an object or text, you can simply put a spot varnish shape over black, which will give you a great effect. This will work well with most dark colours.
